

VARUN KAPOOR

Indore, India | +91 6267389969 | varunkapoor1105@gmail.com | linkedin.com/in/varun-kapoor-it | github.com/Varunnnnn11

PROFILE SUMMARY

Backend-focused Information Technology student with hands-on experience engineering scalable, production-grade systems in Java and Spring Boot, complemented by working knowledge of DevOps practices including Docker, Kubernetes, CI/CD pipelines. Demonstrated ability to architect geospatial data pipelines, integrate AI-driven APIs, and secure applications with JWT-based authentication. Passionate about performance optimization, clean system design, and data-driven backend engineering.

TECHNICAL SKILLS

Languages: Java (Core & Advanced), C, C++, Dart, JavaScript, HTML/CSS, SQL

Frameworks: Spring Boot, Hibernate, Servlets, JSP, Flutter, RESTful APIs, JavaMail API

Databases: PostgreSQL, PostGIS, MySQL, Redis

DevOps & Cloud: Linux, Git, GitHub, Docker, Kubernetes, CI/CD

Tools: Postman, Leaflet.js, Mapbox

Concepts: OOP, Data Structures & Algorithms, DBMS, Computer Networks, Operating Systems, SDLC

EXPERIENCE

IT Intern — Softude Infotech Pvt. Ltd.

1st – 30th June 2026

Indore, India

Developed and deployed backend features using Java and Spring Boot, assisted in containerisation with Docker, and participated in CI/CD deployment workflows as part of the core engineering team.

EDUCATION

B.Tech, Information Technology — Medi-Caps University, Indore

Expected 2027

12th Grade (CBSE), English Medium

2023

PROJECTS

Strideun — GPS Territory Painting Fitness App

Spring Boot, Java 21, PostgreSQL, PostGIS, Redis, Flutter, Mapbox, JWT | [strideUN-Backend](#), [strideUN-Flutter](#)

- Architected the full backend for a gamified fitness platform where users claim map territories via GPS, supporting concurrent multi-user ownership through PostGIS spatial indexing on PostgreSQL.
- Reduced GPS processing overhead ~40% with a 30-second coordinate batching pipeline and a 6-layer Kalman filter, eliminating hardware noise and blocking GPS spoofing.
- Eliminated redundant leaderboard queries via Redis caching, enabling sub-millisecond cache-hit responses on live rankings at scale.
- Hardened API endpoints with stateless JWT authentication using rotating access/refresh token pairs across Flutter and Spring Boot.

EzEv — Smart EV Charging & AI Route Planning Platform

Java, Servlets, JSP, Hibernate, Leaflet.js, Groq AI (Llama 3), OpenChargeMap API, JavaMail API | github.com/Varunnnnn11/EZEV

- Engineered a full-stack platform for listing, discovering, and booking EV charging stations, managing booking state through a normalized MySQL schema via Hibernate ORM.
- Designed an AI-powered waypoint algorithm combining Groq API (Llama 3), the Haversine formula, and live battery/range inputs to recommend optimal charging stops.
- Integrated live OpenChargeMap API data into an interactive Leaflet.js map for real-time station availability, connector types, and pricing.
- Automated transactional email confirmations via JavaMail API for booking receipts and wallet summaries.

CERTIFICATIONS

- Java 2.0 (Core & Advanced) Training — Universal Informatics, Indore (Feb–May 2025)
- Spring & Spring Boot (J2EE Enterprise Edition) Training — Universal Informatics, Indore (Sept–Nov 2025)
- Python 3.4.3 Training — EduPyramids, Spoken Tutorial Project, IIT Bombay (Oct 2025)
- Linux Training — Spoken Tutorial Project, IIT Bombay (Mar 2025)
